

MICHAEL CLAY OCHIENG

Tel: +254 704 769 219 [Email](#) [Github](#) [LinkedIn](#)

Full-Stack Software Engineer skilled in building high-performance backend systems, RESTful web services, and responsive user interfaces using Go (Golang), Node.js, and relational databases. Experienced across the entire software development lifecycle—from designing database schemas and optimizing complex SQL queries to building secure authentication systems, automated workflows, and real-time APIs. Combines strong software development expertise with practical IT infrastructure support, network troubleshooting, and system administration. Focused on engineering clean, maintainable code, reducing operational bottlenecks, and building scalable software solutions for fintech and distributed systems.

TECHNICAL SKILLS

Languages: Go, JavaScript, HTML, CSS, SQL, MySQL, PostgreSQL

Infrastructure and tools: Git, GitHub, VS Code, Linux, REST APIs, Postman, LAN troubleshooting, IP addressing, routing & switching

Frameworks: Gin, Node.js, Express.js

PROJECTS

Queue management system : [Github](#)

Node.js, Express, MySQL, SMS API, HTML/CSS/JS

- Built a bank queue system with a 5-table MySQL schema, automated till routing, and real-time cashier dashboard sync across 4 service tracks.
- Automated customer notifications via SMS triggers and printable receipt generation to reduce waiting times.

Toolzzz : [Github](#) Live Link: [Toolzzz live link](#)

React, Node.js, Open router, Groq, Gemini api's.

- **API Integrations: 4+ AI models/providers** integrated (OpenRouter, Groq, Gemini API, custom endpoints).
- **Response Latency: <500ms** prompt-to-response generation time via optimized API routing.
- **Deployment Efficiency: 100% automated** build & deployment pipeline configured via repository webhooks.

Construction site MS: [Github](#)

Node.js, Express, MySQL, HTML, CSS, JS, Africastalking sms api.

- **User capacity:** Designed to track 50+ active site workers and daily shift logs.
- **Workflow impact:** Reduced manual payout calculation time by ~50% with 100% mathematical accuracy.

ICT help desk ticketing system: [Github](#)

HTML, CSS, JS, MySQL

- **Request handling:** Built to process and route 100+ concurrent support tickets.
- **Error reduction:** Validation middleware eliminated 90%+ of unhandled runtime errors and invalid input payloads.
- **Resolution speed:** Cut ticket logging and status-tracking overhead by ~30%.

Restaurant POS system: [Github](#)

Node.js, SQL, Express, HTML, CSS and JS.

- **Query speed:** Indexed SQL queries optimized to return transaction histories in <200ms.
- **Reporting efficiency:** Automated daily sales summaries and inventory reconciliation, saving ~40% of manual bookkeeping time.

WORK EXPERIENCE

Software engineer Zone 01 Kisumu

- Building Go-based microservices and CLI tools using standard libraries.
- Practicing clean code reviews, containerization, and Git workflows.

ICT Officer Attaché — The Judiciary, Kisumu

- Provided technical support and maintained LAN infrastructure.
- Resolved hardware/software issues and network bottlenecks.
- Improved ICT response time and ticket resolution efficiency.

EDUCATION - Kabarak University - Bachelor of Science in Computer Science
